

THE TRUTH MATTERS

The Biden-Harris Administration

Advanced policies to dramatically reduce the greenhouse gas pollution that is harming our health and putting families and communities at risk.

Bolstered scientific understanding of extreme weather events fueled by climate change and publicly-available, real-time weather information.

Signed a clean energy plan into law that provides \$369 billion in investment toward the economy of the future - and already accounts for over 300,000 good-paying, family-sustaining jobs.

Attended the global climate conference where Vice President Harris affirmed U.S. participation in the Paris Agreement, a blueprint for a stable climate and a safer future for our children.

Trump's Project 2025

Would roll back essential protections for clean air and water and a livable climate.

Would defund scientific research and privatize weather reports.

Would repeal clean energy investments and expand the burning of dirty fossil fuels.

Would exit the Paris Agreement — again.
